Project 04

PROJECT 1 / 4

# Onboarding Funnel Analysis

Identifying drop-off bottlenecks across 6 funnel stages · 50,000 app installs · 4 channels

# Business Context & Problem Statement

**+34%**

CAC Increase YoY

**~13%**

End-to-End Activation

**€85**

Avg LTV per User

**18–44**

Target Market (age)

## The Problem

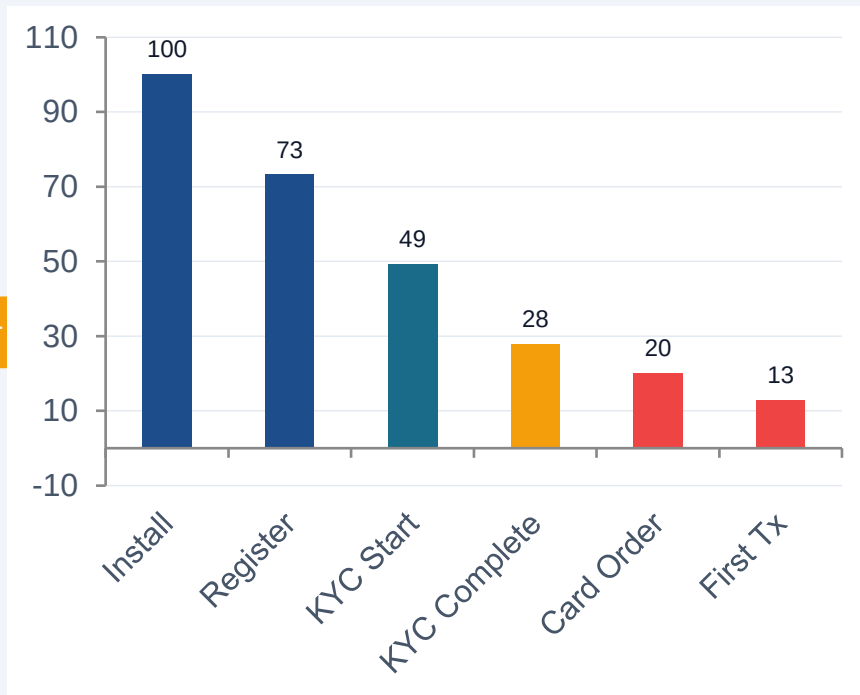

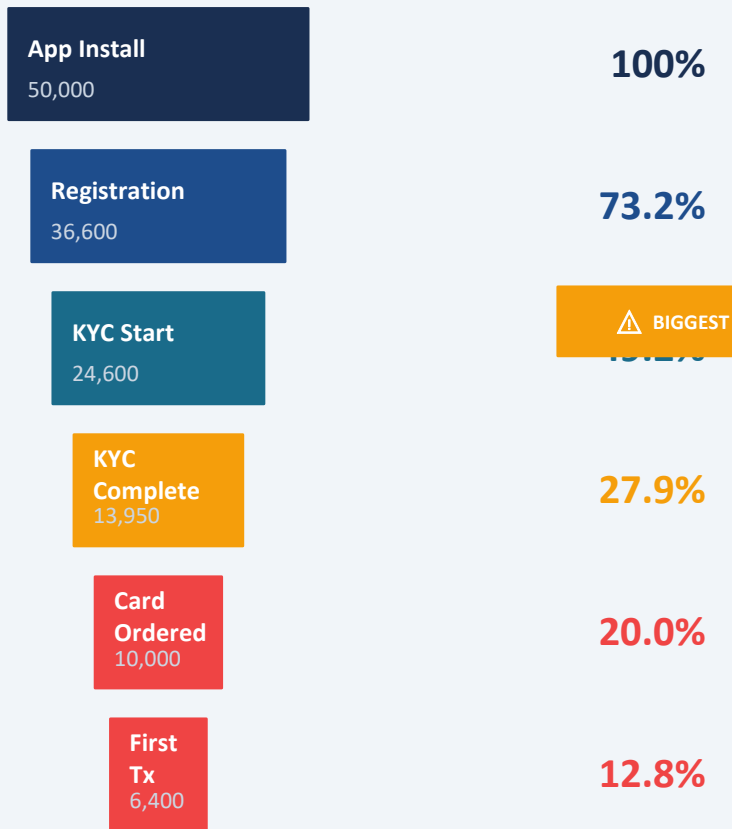

1. CAC increased 34% YoY while activation rates stagnated
2. Only ~13% of app installs complete first transaction within 7 days
3. Multiple funnel stages are losing users without clear root cause
4. Revenue impact of each drop-off is unknown

## Key Questions

- Where exactly do users drop off in the funnel?
- Which segments have the highest drop-off rates?
- What is the revenue impact of each drop-off point?
- Which improvements would have the highest ROI?

# 6-Stage Onboarding Funnel

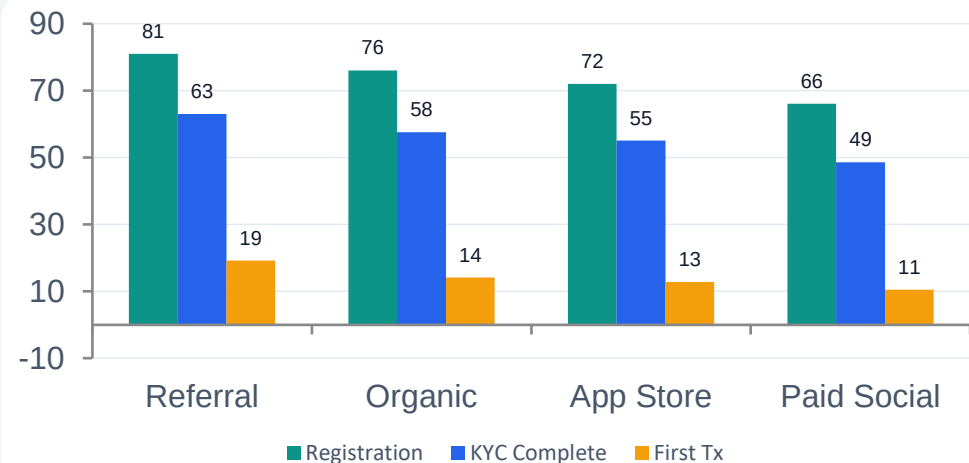

Overall conversion from app install to first transaction · 50,000 users

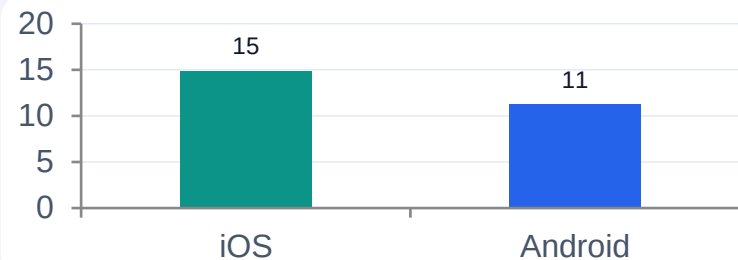

- KYC completion (56.6% step rate) is the #1 bottleneck — responsible for the largest user drop in absolute numbers

# Funnel Performance by Acquisition Channel & Segment

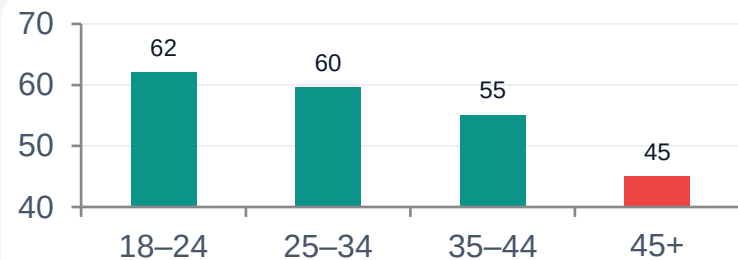

Registration → KYC → First Tx by Channel (%)

iOS vs Android — Activation Rate (%)

KYC Completion by Age Group (%)

## ✓ Referral #1 channel

19.2% end-to-end activation — best LTV users

## ⚠ Paid Social weakest

10.5% activation — reallocate budget to referral

## 📱 iOS leads Android

3.6pp gap at every funnel step — Android QA sprint needed

## 👴 45+ group at risk

45% KYC vs 62% for 18–24 — photo friction likely cause

# Top Recommendations & Proposed A/B Tests

Prioritized by business impact and implementation feasibility

 **HIGH IMPACT**

## KYC Progress Bar

Redesign KYC UX with step-by-step progress indicator  
+5pp lift target → +€340K annual revenue  
Recommended: Test → Ship (Project 2)

 **HIGH IMPACT**

## Card Activation Nudge

Push notification on card arrival + €2 cashback  
Targets card→first Tx drop-off (63.7%)  
Estimated lift: +3pp at card→Tx stage

 **HIGH IMPACT**

## Simplified Registration

Remove phone number field, email-only signup  
Reduces registration drop from 26.8% → ~20%  
Activation rate improvement: +~1.5pp

 **MED IMPACT**

## Scale Referral Program

€10 referral bonus + budget realloc. from paid social  
Highest LTV channel, lower CAC  
Potential: +2pp overall activation rate

 **Expected combined impact: KYC 56.6% → 61.6% · Registration 73.2% → 80% · End-to-end activation 13% → 18.5% · +~€400K/year**

PROJECT 2 / 4

# A/B Test: KYC Progress Bar

Randomized controlled trial · 50/50 split · 28 days · MDE +5pp · Power 80%

# Experiment Design & Primary Results

## CONTROL GROUP

### Current KYC Flow

- No progress indicator
- Blank header above form
- User unaware of total steps
- Baseline: 56.6% completion

VS

## TREATMENT GROUP

### KYC + Progress Bar

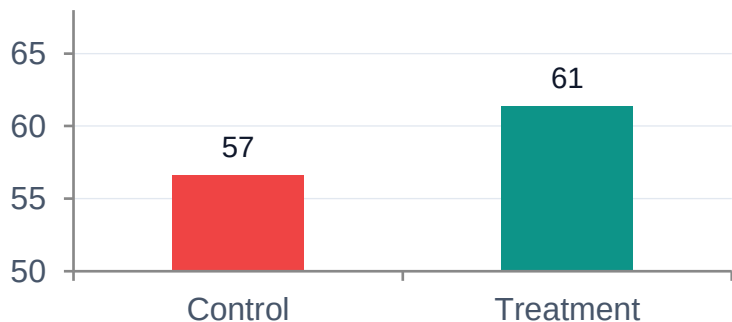

- Step-by-step bar at top
- "Step 1 of 4" indicator
- Checkmarks for completed steps
- Tested lift: +5pp

Control 56.6%

Treatment 61.4%

Lift +4.82pp

M1 Lift

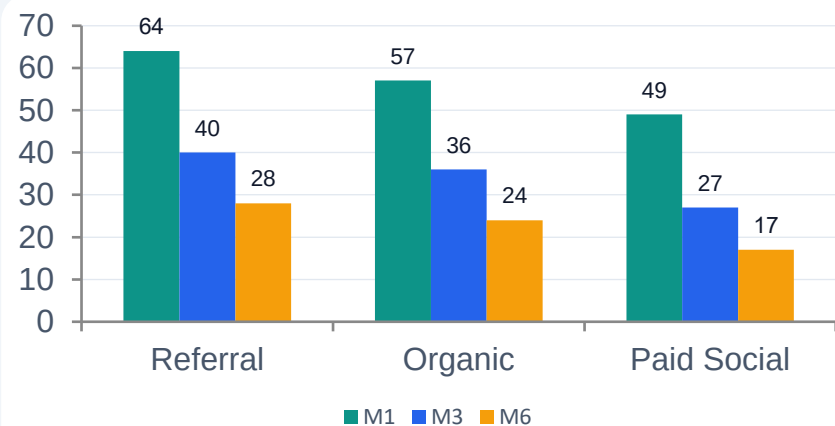

17%→26%

Pre→Post M6 Retention

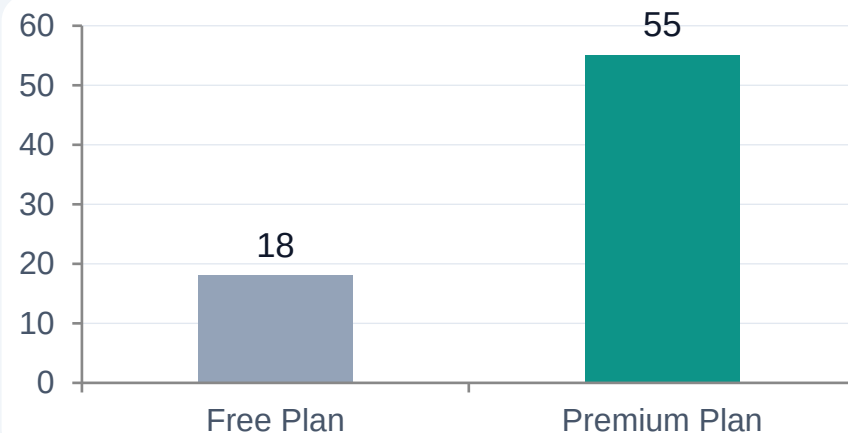

# Retention Drivers & LTV Projection

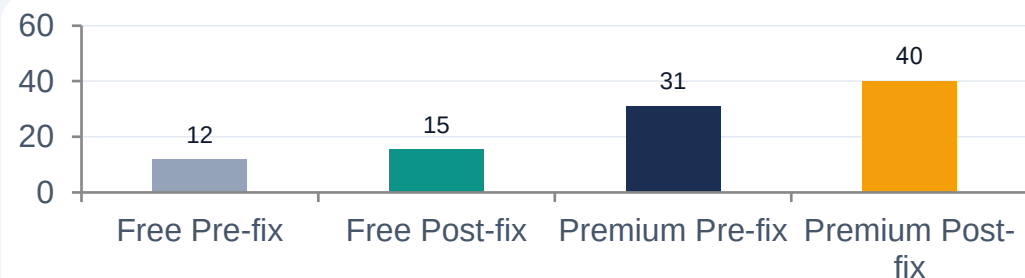

Retention by Acquisition Channel (%)

Free vs Premium — M6 Retention (%)

12-Month LTV per User (€)

## Premium = #1 driver

3x better M6 retention (55% vs 18%)  
Build upgrade funnel for M1-M2 users

## +30% LTV post-fix

+€3.60 per free user  
Annual uplift: €220K

## Referral best channel

28% M6 vs 17% paid social  
Scale program (Project 4 priority)

PROJECT 4 / 4

# User Segmentation & Monetization

K-Means Clustering · PCA · RFM-style segmentation · €40K/month opportunity

# 4 User Segments — K-Means Clustering Deep Dive

6 behavioral features · StandardScaler · Elbow at K=4 · PCA: 62% variance explained

### Power Users

8% of users

|      |         |         |
|------|---------|---------|
| €22  | 58%     | 74%     |
| ARPU | M6 Ret. | Premium |

Heavy spenders, high engagement, premium subscribers. Core revenue engine.

### Growth Users

22% of users

|      |         |         |
|------|---------|---------|
| €9   | 38%     | 32%     |
| ARPU | M6 Ret. | Premium |

Active, savings-oriented, moderate frequency. Prime upgrade targets.

### Casual Users

27% of users

|      |         |         |
|------|---------|---------|
| €4   | 22%     | 8%      |
| ARPU | M6 Ret. | Premium |

Low engagement, sporadic transactions. Need onboarding nudges to activate.

### Dormant Users

43% of users

|      |         |         |
|------|---------|---------|
| €0.5 | 5%      | 2%      |
| ARPU | M6 Ret. | Premium |

Old accounts, minimal activity. Re-engagement campaign or graceful exit.

# Per-Segment Monetization Strategy

Tailored product and marketing approach for each of the 4 segments

## Power Users

### VIP Program

- Exclusive VIP badge + premium features ribbon
- Personal finance insights + concierge support
- Annual plan discount to lock in loyalty

**Goal:** Retain €22 ARPU · Reduce churn risk

## Growth Users

### Upgrade Nudge

- Savings goal prompt + in-app notifications
- 30-day free Premium trial at month 2
- Feature showcase: investments, budgeting

**Goal:** Upgrade to Premium · +€13 ARPU potential

## Casual Users

### Re-engage

- Simplified 2-step onboarding re-entry
- Weekly summary email with spending insights
- First premium feature trial (no payment)

**Goal:** Increase tx frequency · Move to Growth

## Dormant Users

### Win-Back

- Email win-back + €5 app credit offer
- Personalized new features highlight
- Option: pause account or graceful delete

**Goal:** Reactivate or reduce infra cost

**Total Monetization Opportunity: €40K/month · €480K/year · 9.6× ROI on €50K investment**

# The Data-Driven Product Loop
